

The

Water

Cycle

SOLID

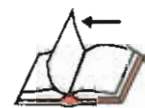

LIQUID

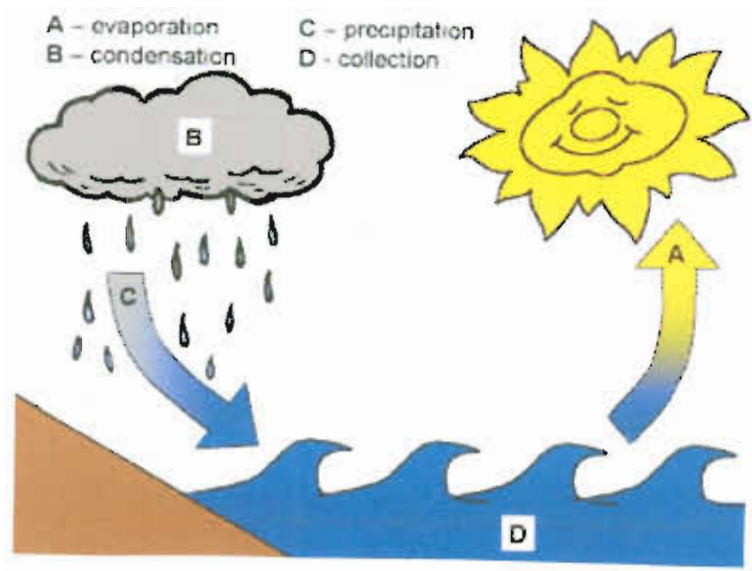

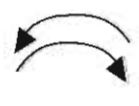

GAS

       
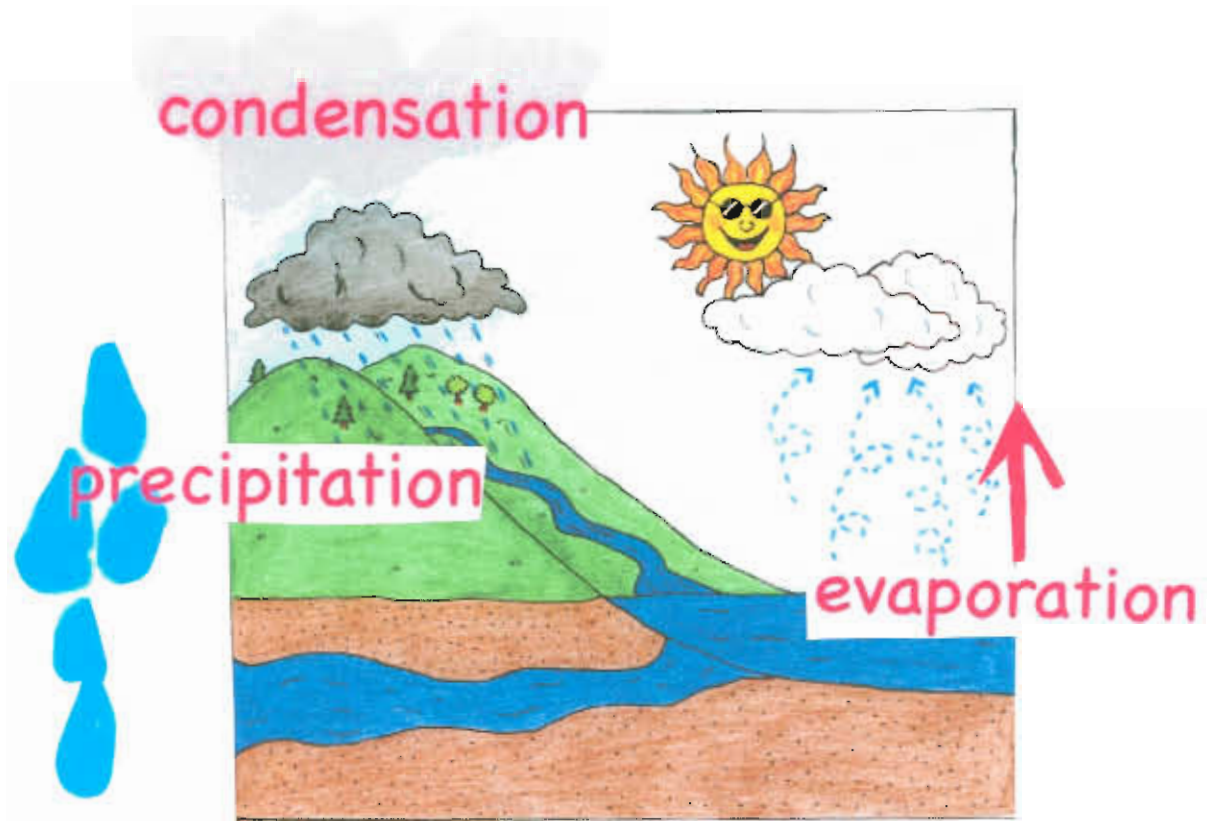

Earth's surface is made up of 70% water.

 The changes and movement of water on Earth is
 called the water cycle.

The

water

cycle

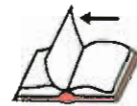

has

3

three

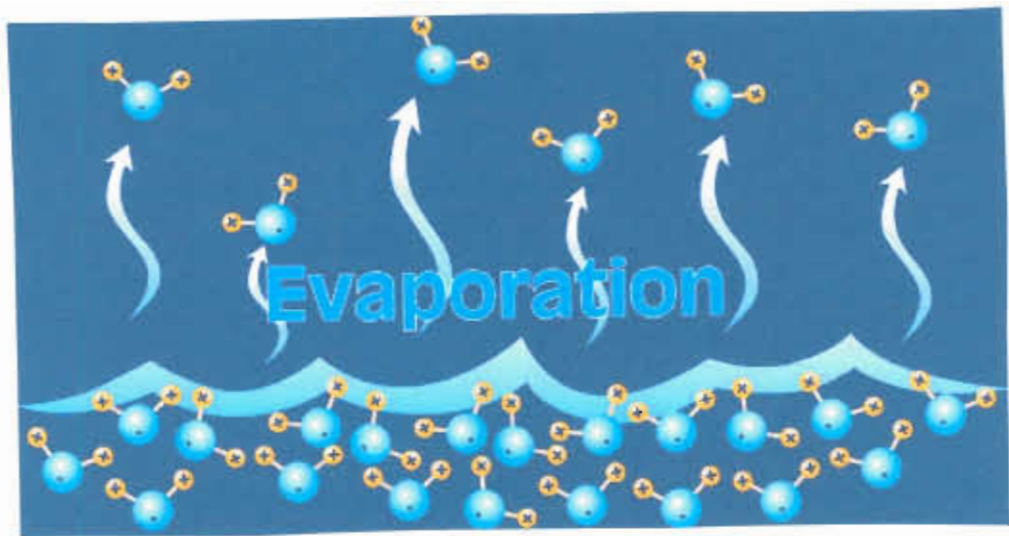

parts.

Page

3

3

Part

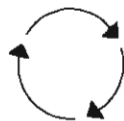

1:

The

water

cycle

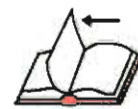

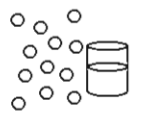

starts

with

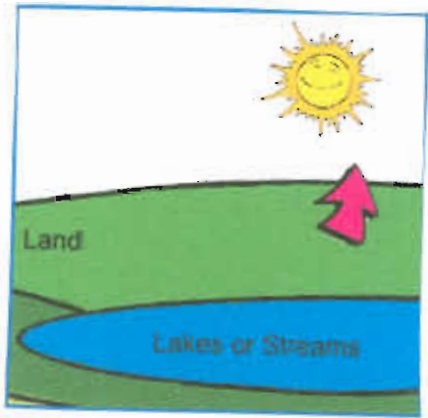

evaporation (gas) .

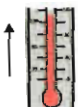

Page

4

4

 Evaporation is when the sun heats the water and

 it rises as a gas called water vapor.

The

water

vapor

rises

into

the

air

and

cools.

Page

6

6

Part

2

:

The

water

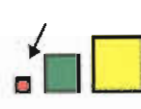

vapor

turns

into

tiny

water

drops,

this

is

called

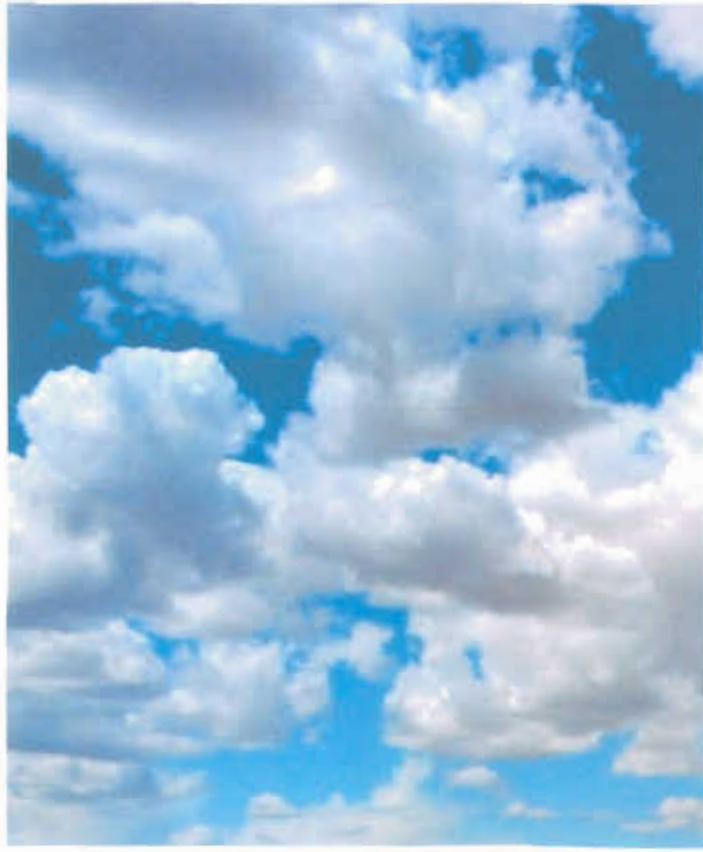

condensation.

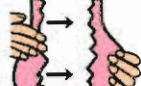

Page

7

7

       
Clouds are made by the tiny water drops

 
coming together.

Part

3

3:

The

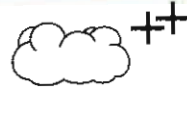

air

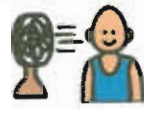

in

the

clouds

cools.

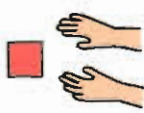

The

water

drops

get

heavy

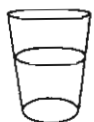

and

fall

as rain

(liquid).

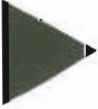

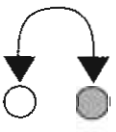

Page

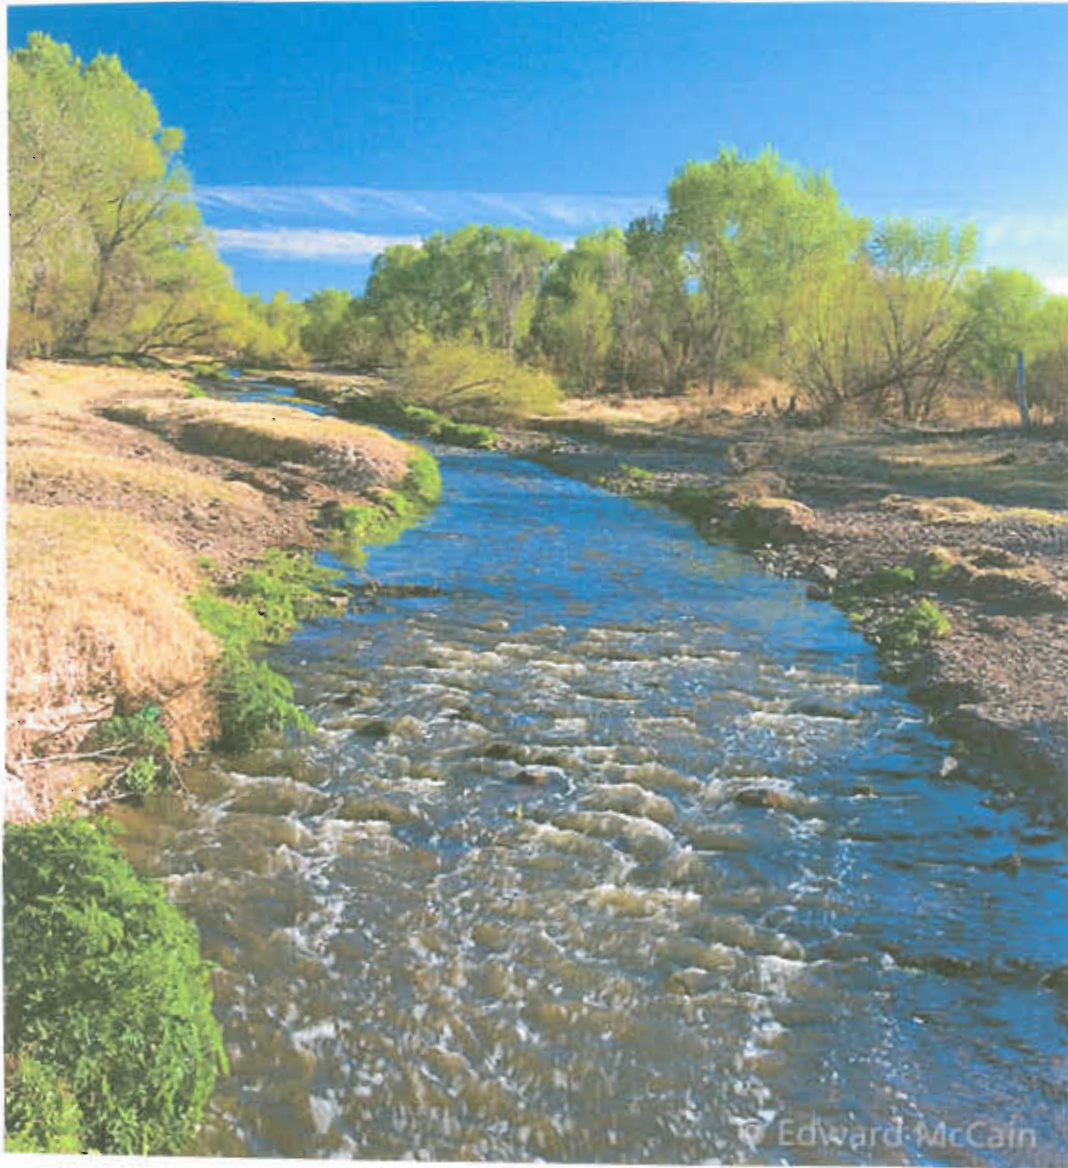

9

9

...       
 If the water drops freeze, it drops as solids, like
       
 snow, sleet or hail. This is called precipitation.

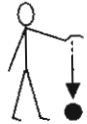

The

precipitation

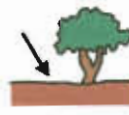

falls

to

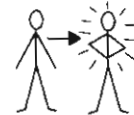

the

ground

and

becomes

part of

the

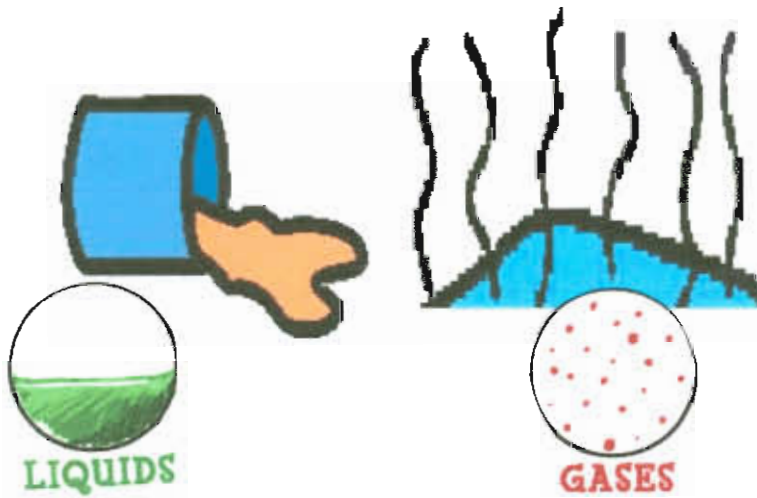

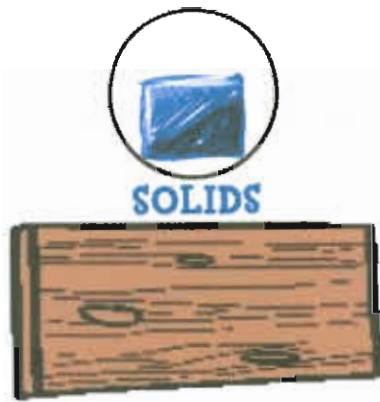

Earth.

▶   includes **3**  parts,  evaporation ( gas)

 condensation( liquid) **&**  precipitation ( solid or  liquid).

The Water Cycle Song

(sung to the tune of *She'll be Comin' Round the Mountain*)

**Water travels in a cycle yes it does, ye-ha!
Water travels in a cycle yes it does, ye-ha!**

It goes UP as *EVAPORATION*
Forms a CLOUD as *CONDENSATION*
Then falls down as *PRECIPITATION*,

Yes it does, ye-ha!
