Continuing Education Trauma Certificate Workshops

Graduate level degree holders (and above) can apply to participate in a Workshop Series in Childhood and Adolescent Trauma through the Continuing Education Office at the SSW which concentrates the professionals' learning upon trauma-informed assessment, treatment and evaluation models working with these populations while incorporating discussions of the relevance of the NCTSN's *Twelve Core Concepts of Trauma*.

The workshop sequence is completed with the attainment of 72 CEU credits with one workshop taken every month over a 12-month period. Participants can focus content on their required client population after beginning with one specialized workshops built upon the curriculum foundations of the National Traumatic Stress Network (NCTSN). The first workshop may be offered every other month so participants only wait 60 days to start the Program. See dates below and descriptions on the next page.

Workshop	Date
Module 1: Introductory Workshop	1/8/21
Module 2: Amarika Case Study	2/12/21
Module 3: Juan Case Study	3/12/21
Module 4: Geraldine Case Study	4/9/21
Module 5: Ibrahim Case Study	5/14/21
Module 6: James Case Study	6/11/21
Module 7: Evidence-Informed Tx Model - Cognitive Behavioral Intervention for Trauma in Schools (CBITS)	7/9/21
Module 8: Evidence-Based Tx Model - Child-Parent Psychotherapy (CPP)	8/13/21
Module 9: Evidence-Informed Tx Model - Community Resiliency Model (CRM)	9/10/21
Module 10: Evidence-Based Tx Model - Trauma-Focused Cognitive Behavioral Therapy (TF-CBT)	10/8/21
Module 11: Evidence-Informed Tx Model - Trauma Systems Therapy (TST)	11/12/21
Module 12: Clinical Trauma Evaluation and Use of Standardized Tools	12/10/21

TWELVE MODULE—CONTENTS

2 Specific Content Modules

- 1) Introductory session (For all attendees) to bring Interdisciplinary members together, and familiarize them with common assessment tools.
- 2) Case evaluation using evidence-based assessment tools.

5 Modules: Core Concepts Case Studies

Taken from real cases of children experiencing traumatic life events, these 5 case studies focus upon assessment and treatment of child / adolescent reaction to traumatic life events.

- Pre-verbal, 18-month-old child, exposed to public violence
- Three-year-old toddler experiencing child sexual abuse
- Nine-year-old experiencing the death of her mother at the hands of her father.
- Ten-year-old experiencing physical trauma after immigration with prior trauma in homeland
- Thirteen-year-old experiencing physical abuse at hands of father.

5 Modules: Covering Treatment:

- Child-Parent Psychotherapy (CPP) – a coaching model that supports the relationship between the parent and 0-5 year old child to combat negative effects of trauma.
 - Cognitive Behavioral Intervention for Trauma in Schools (CBITS) – this group-based, trauma-informed group model targets middle school-aged children to develop healthy self-soothing skills so they can return to classes and stabilize themselves. Parents and Teachers are briefly engaged in this model.
 - Community Resiliency Model (CRM) – a trauma recovery model that can be taught to children, adolescents, and adults using psychoeducation and personal resources/ supports that counteract the negative effects of a sympathetic nervous system response. This model does not require the client to reconstruct a trauma narrative.
 - Trauma-Focused Cognitive Behavioral Therapy (TF-CBT)- a manualized trauma-informed version of Cognitive Behavioral Therapy engaging the child or adolescent and a parent or caregiver in individual sessions following a mnemonic (PRACTICE) which outlines the stages of sessions.
 - Trauma Systems Treatment (TST) – a trauma-informed version of Multisystemic Therapy. This model targets behavioral post-trauma disturbances of children and adolescents
-
